

BOSE® 302A LOUDSPEAKER

A premium quality, versatile full-range loudspeaker for superb sound in small-to-medium-sized indoor and outdoor locations.

YOUR BUSINESS NEED THE BOSE SOLUTION

Full-range sound with broad, even coverage

A full-range, two-way speaker, the 302A loudspeaker uses a proprietary Articulated Array® speaker design to reproduce sound over a wide listening area, enabling fewer speakers to provide more coverage. A patented Acoustimass® multi-chamber bass enclosure delivers full, deep bass without audible distortion.

Sound that won't disappear into thin air

Many indoor/outdoor speakers lose much of their impact outside. The Bose 302A loudspeaker – the result of extensive research, innovative technology and rigorous testing – is engineered to provide superior full-range sound indoors or out.

Speakers that won't disappear, either

Theft and vandalism are real concerns, so many business owners might be hesitant to hang a quality speaker in an open area. We share that concern. All 302A speakers come equipped with heavy-duty mounting brackets supplied with flanged self-locking screws that lock the speakers securely in place on walls or the ceiling.

Speakers that are enduringly elegant

The 302A speaker is as stylish as it is durable. Its distinctive look appeals to architects and designers, yet never overwhelms its surroundings. It is built to last through snow, rain, salt and temperature extremes of 60°C to -30°C, and it survived the Salt Fog test 66% longer than the demanding Marine Industry Standard. Its 5-year transferable warranty is one of the strongest in the industry.
