

A compact, high-fidelity patented loudspeaker engineered for high-quality voice reinforcement and music reproduction in small to medium-size rooms. Now with new Kevlar drivers, these loudspeakers are designed to withstand extreme environmental conditions. Their light weight makes them well suited for either permanent or portable sound systems.

Your business need

Speakers that reproduce clear, natural sound and the intimate quality of the human voice and musical instruments

Far-reaching coverage from speakers that don't block the performance

Speakers that deliver exceptional performance indoors and outdoors

Versatility that matches the performance

Reliability you can count on

The BOSE® Solution

Enhanced acoustic performance makes these speakers more natural sounding than ever. Four proprietary 11,4 cm (4.5") full-range drivers and active EQ help reproduce vocals, guitars and other acoustic instruments with improved smoothness and warmth, and deliver lifelike sound from prerecorded music.

A proprietary Articulated Array® baffle positions the drivers for broad horizontal and narrow vertical dispersion. An acoustic diffractor broadens and smooths the sound pattern for more uniform, even coverage – all from slim, compact speakers that allow the audience to see as well as hear.

PANARAY® 402® II speakers are a new addition to our Installed Anywhere speaker line meeting our strictest standards for outdoor use. The transducer has been re-engineered to withstand weather extremes – from blistering heat to frigid cold; dry, dusty air to dense fog; wind, rain, snow and sleet. The input/output connectors are extremely rugged and reliable, and the mica-reinforced high-impact polyethylene cabinet helps protect these speakers from the weather and wear and tear.

Active equalization allows PANARAY® 402® speakers to deliver excellent full-range performance in small, mid-size and large venues. Their light weight – only 7 kg (15 pounds) – makes them extremely easy to carry, and ideal as well for permanent installation in distributed systems such as a balcony fill speaker, for instance. A full line of optional brackets and stands accommodates a wide variety of configurations.

BOSE® full-range drivers make PANARAY® 402® loudspeakers more reliable than conventional speakers whose small, separate tweeters are often unable to handle the high power and extended use required for professional applications. We back each PANARAY® 402® II loudspeaker with our full five-year limited warranty
