

A high-performance modular bass loudspeaker designed for engineered and portable use. The MB4 speaker offers a wide frequency range, which provides deep, impactful bass in almost any application.

#### Your business need

A dedicated bass loudspeaker that expands the range of your sound system

A bass solution equally effective on its own or in multiple configuration

A bass loudspeaker that can be permanent or portable

More bass where you want it – and less where you don't

Reliability you can count on

#### The BOSE® Solution

The Panaray® MB4 speaker provides extended low end in small-to-large permanent and portable applications. Its high output, wide bandwidth and compact size make the MB4 speaker an ideal match for others in the BOSE® Panaray line of speakers, providing the proper bass response whatever the application. From small-to-medium venues such as bars, restaurants, clubs, hotels and retail environments to large venues such as houses of worship and theaters, the MB4 speaker meets your business need.

The MB4 modular bass loudspeaker can be used as a building block – when you need more bass, simply combine units. Its modular design allows you to safely stack multiple units to match the bass output to your mid-to-high frequency loudspeakers.

Permanent and portable – the MB4 speaker is designed to be both. Its rugged design and durable endcaps provide protection from constant setup and tear-down. Built-in handles allow it to be easily moved by a single person. In permanent installations, the integrated hang points allow it to be ceiling or wall-mounted in singles, multiples and arrays.

The MB4 speaker in a bass array is an excellent choice whenever you need to control bass throughout your venue. When multiple units are used with the custom bass array brackets and the Panaray system digital controller you can target your bass energy – directing it to the dance floor but not the bar, for example. The combination of the MB4 speaker, bass array brackets and the Panaray system digital controller provides a level of bass directivity unattainable in a typical conventional sound system.

The MB4 loudspeaker is engineered and tested for demanding environments, and is backed by a transferable five-year limited warranty.
