

A custom-engineered system that delivers clear, high-fidelity sound in outdoor stadiums, open air theaters, sports complexes and arenas.

### Facilities have unique needs

High-fidelity music and intelligible announcements

Quality sound that can be heard above the crowd

A system designed for your facility

Easy installation and maintenance

Reliable performance

### BOSE® has unique solutions

The tightly-focused sound pattern of PANARAY® LT clusters minimizes overlapping sounds. Music sounds natural, and announcements sound clear and intelligible.

BOSE® proprietary engineering allows the PANARAY LT speaker system to deliver high-fidelity sound in the most challenging environments at distances of 22.9 m (75 feet) or more.

Your PANARAY LT system will be custom designed using sophisticated acoustical mapping of your space. The design includes strategically placing the equipment in your facility to ensure that the quality sound you expect is heard throughout the listening area.

Created from a composite sandwich of structural foam and aluminum, PANARAY LT loudspeakers are attached to a steel backbone. This combination of strength and light weight reduces stress on the structures from which the loudspeakers hang, making installation and maintenance easier than with other large venue loudspeakers.

These loudspeakers are engineered and tested for demanding professional applications, and are backed by a transferable two-year limited warranty.
